

WDPA Data Status Report

Central African Republic

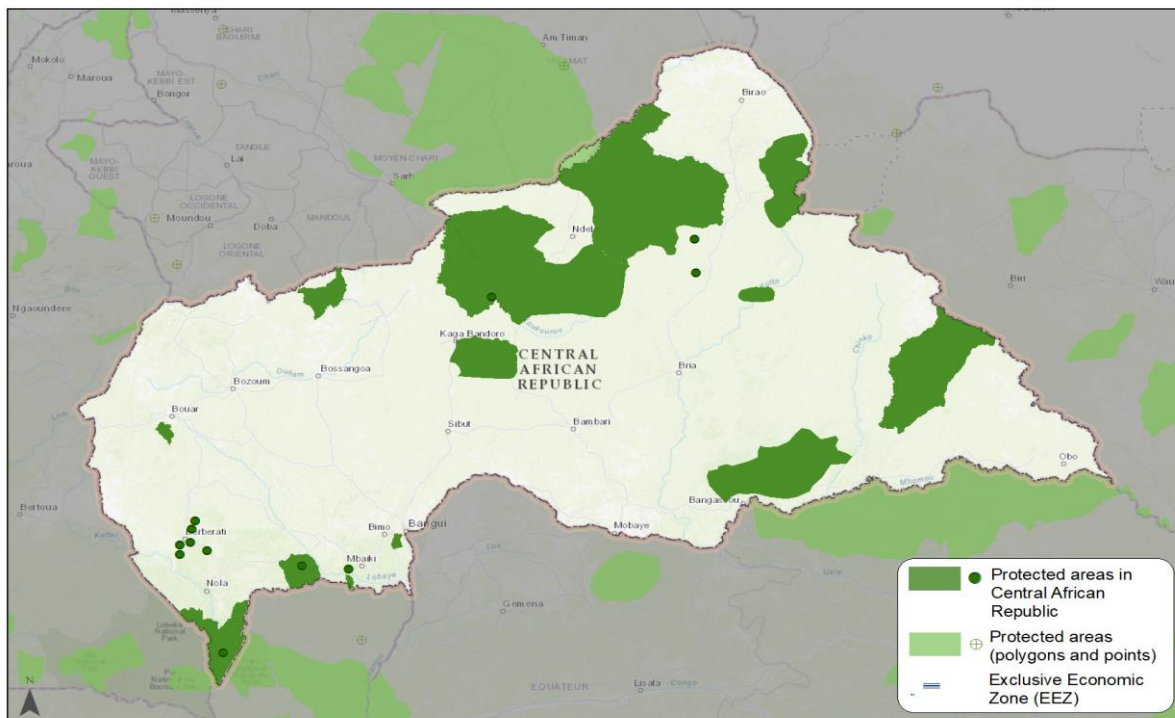

March 2020

About this Report and the World Database on Protected Areas (WDPA)

The WDPA is the most comprehensive global dataset on terrestrial and marine protected areas, incorporating the official UN List of Protected Areas. The WDPA dataset is not necessarily a complete representation of all the protected areas which have been designated in country. The quality of the WDPA depends on the accessibility of accurate, comprehensive, up-to-date protected areas information from data holders.

This report describes the current status of data in the WDPA for all sites included in the March 2020 monthly release for Central African Republic. The WDPA is updated each month, and the information in this factsheet may have been superseded by a more recent update.

Map showing protected areas in the WDPA

The boundaries and names shown and the designations used on maps do not imply official endorsement or acceptance by the UN Environment Programme or contributory organisations. Boundaries for Exclusive Economic Zones (EEZs) may be partially displayed where protected area records are not present throughout the whole EEZ. EEZs are not displayed where countries are landlocked.

Protected areas data in the WDPA for Central African Republic

There are 37 protected area records stored in the WDPA for Central African Republic, 32 are national-level protected areas with 5 designated under international and regional agreements or conventions.

68% of the data have boundaries in polygon format, with the remaining 32% depicted in point format (i.e. a single latitude and longitude point for the protected area). See Figure 1.

Of the 37 protected areas, none contain a marine a component.

Figure 1: Ratio of points to polygons

Data for protected areas designated under international and regional conventions and agreements

There are 5 protected areas in the WDPA designated under international or regional conventions or agreements.

1 is a World Heritage Site (WHS); 2 are Ramsar Wetlands of International Importance; 2 are UNESCO Man and the Biosphere Reserves (MAB). See Figure 2.

Figure 2: Number of WHS, Ramsar and MAB sites

Data for national-level protected areas

There are 32 national-level protected area records in the WDPA. IUCN Management Categories have been reported for 31 of these records. The remaining 1 features are recorded as Not Reported.

Figure 3 shows the allocation of IUCN Management Categories across national-level protected area records in the WDPA (numbers of sites in each category are shown in Table 2 at the end of this report).

Figure 3: National-level protected areas by IUCN Management Category

Completeness of WDPA Data Attributes for Central African Republic

The WDPA requires that a minimum set of information is provided with each protected area record. These data attributes are defined in the WDPA User Manual.

Table 1 shows the extent to which key attributes have been reported by data providers for all protected area records in the WDPA for Central African Republic.

Table 1: Completeness of selected attributes

Attribute	Completeness
IUCN Category	46%
Status (designated or proposed)	100%
Status Year	78%
Governance Type	0%
Management Authority	0%
Link to Management Plan	8%

The WDPA User Manual 1.6 can be viewed at http://wcmc.io/WDPA_Manual.

Data sources in the WDPA for Central African Republic

Data in the WDPA have been obtained or validated from 2 sources for Central African Republic.

Figure 4 shows the breakdown of when protected area records in the WDPA were last updated or validated.

Data for protected areas designated under international agreements and conventions have been sourced from the relevant convention secretariat. This includes: UNESCO World Heritage Centre, Ramsar Convention Secretariat and UNESCO Man and The Biosphere Programme.

Data for national-level protected areas in the WDPA have been sourced from national authorities wherever possible. Information may also be supplemented by data from other agencies or organisations working in each country. As part of the update process for national data, national authorities are given the opportunity to review, validate and, where necessary, edit all existing WDPA records for their country. All updates to the WDPA by national authorities take priority over other sources and are considered to be the authoritative version.

There are 3 records in the WDPA with no reported source for Central African Republic.

National-level data in Central African Republic are provided by two sources: Central African Forests Commission (COMIFAC); African Forest Observatory (FORAF), Democratic Republic of Congo.

WDPA Quality Indicators for Central African Republic

The percentage of records with boundaries in polygon format

The WDPA stores all records with spatial (location) data. These data can be polygons which represent the boundaries of the protected area, or a single latitude/longitude point which shows the general location of the protected area. This indicator shows the percentage of records with boundaries - the preferred spatial data.

The percentage of data attributes which have been reported by the data provider

Each record in the WDPA has 25 fields for which data attributes are requested. This indicator shows the weighted percentage of data fields which have been reported, based on the minimum, core and complete attributes. *Due to a change in the calculation of this quality indicator, values pre-2015 and post-2015 are not directly comparable.*

The percentage of records updated or validated by the data provider in the last 5 years

UNEP-WCMC sets a target to update each record in the WDPA at least every five years. This indicator shows the percentage of records updated in the last 5 years (since January 2015).

The percentage of records where the area of the polygon is within 5% of the area reported

The area (km²) reported for a protected area may sometimes differ from the calculated GIS area of the boundary polygon provided, possibly indicating a discrepancy within the information submitted. This indicator shows the percentage of records where the area of the polygon is within a threshold of 5% of the area reported. The threshold allows for differences due to projections and software used for calculating the GIS area.

0 100 The range of scores for individual countries in the WDPA
